# IPCC scenarios, integrated assessment models and key concepts for integrating climate change research across research domains

Volker Krey

Material in part courtesy of Keywan Riahi

ICEMF webinar, 3 August 2023

# Overview

- A Brief History of (IPCC) Scenarios
- The "New Scenarios Process"
- Representative Concentration Pathways (RCPs)
- Shared Socioeconomic Pathways (SSPs)
- CMIP6/ScenarioMIP
- Equity and Fairness in Scenarios
- SSP Updates

# A Brief History of (IPCC) Scenarios

### **IPCC: Climate Change Scenarios**

### Projections

What can happen?

- Socioeconomic projection
- Emissions, concentration crimate forcing projections
- Climate change in jections
- Climate input: projections
- Integrated projections

### Pathways

What should happen? How to reach certain goals?

• Mingation pathways

- Adaptatio nathways
- Climate-rectine / development pathways
- Integrated (transformer ib), pathways
- Sustainable development p the ave

### Used as a set

- Baseline and policy scenario pairs
- Multiple pathways to a single goal
- Set of pathways to different goals
- Range of projections spanning possible futures

# Scenarios in IPCC

# A clarification

- last official "IPCC scenarios" were published in 2000 as part of the Special Report on Emissions Scenarios (SRES)
- since then, IPCC has only assessed scenarios that were published in the (peer-reviewed) literature

# The "New Scenarios Process"

# Introduction: Reasons for "new" scenarios

# Reasons for "new" scenarios

Four important reasons to develop new community scenarios for climate assessment:

- 1. Need to cover a wider range of GHG concentrations (SRES only included baseline scenarios)
- 2. Need for a wider set of parameters (Climate models have become more complex; higher information need)
- 3. Need for scenarios that cover mitigation & adaptation issues (need for more collaboration between "WGs")
- 4. Use more recent insight into trends in scenario drivers (update)

# Sequential vs. Parallel Process

Process Sequential Process arallel 

# The Parallel Process

Socio-economic

pathways

Emissions drivers, mitigative capacity

Exposure, sensitivity, adaptive capacity

### **Global Environmental Change Special Issue**

- Overview (Riahi et al. 2017) ullet
- Demographic projections (KC & Lutz 2017) •
- GDP projections (OECD, IIASA, PIK 2017) ullet
- Urbanisation projections (Liang & O'Neill 2017) ۲
- Quantifications of SSPs (6 global IAM teams) •
- Cross-cutting papers on energy, land and air pollution •

## Economic & Demographic Change: five SSPs

Sources: Overview: Riahi et al, 2017, GDP: Dellink et al, 2017; Urbanization: Jiang and O'Neill et al, 2017, Population: KC and Lutz, 2017

## Reference SSP (IAM) Scenarios (no climate policy beyond those in place before 2015)

- Six IAM teams
- Five SSPs
- One representative Marker Scenario for each SSP
- For each SSP there are multiple IAM runs depicting uncertainty ranges

# Energy – SSP Reference Cases

Two marker scenarios where mitigation is relatively easy

- Transition away from coal/oil
- Low demand

- High share of poor with low emissions
- Low/intermediate demand
- Technology available to the "elite"

# Energy – SSP Reference Cases

Two marker scenarios where mitigation is relatively difficult

- Coal-intensive development
- Very high demand

- Fossil-intensive
- High poverty
- Slow technological change
- Strong fragmentation

# Energy – SSP Reference Cases

A central marker scenario with intermediate mitigation challenges

- Balanced technology
- Intermediate demand

# How were these pathways created?

### Storylines Qualitative assumptions SSP5: Fossil fueled Table A.1: Qualitative assumptions for energy demand across SSPs development Rapid growth, free trade High technology development, Environment and social goals not a priority: adaptive, technology-fix Focus on economic growth SSP1:Sustainability Global cooperation Rapid technology dev. ## SSP/RCP combinations based on reference IAM scenarios

**Shared Socio-economic Pathways** 

Increasing challenges to mitigation

# Shared Policy Assumptions (SPAs)

SPAs describe policy assumptions consistent with the widely different challenges to mitigation across the SSP due to, e.g., fragmentation, lack of incritations, inequity, lack of technology, governance, etc..

Two main SPA dimensions

# **CMIP6/ScenarioMIP**

# RCP-SSP Matrix including mitigation pathways down to 1.9 W/m<sup>2</sup>

# Equity and Fairness in Scenarios

# New fair share analysis based on AR6 pathways indicate the need of increasing finance flows

### POLICY FORUM

### CLIMATE POLICY

# Fairness considerations in global mitigation investments

Current mitigation finance flows are inadequate and unfair

Investments in (most) AR6 pathways follow a cost-effectiveness approach (consistent with Article 3 of Paris Agreement).

The pathways, however, do not address the issue of who is financing the regional investments.

New assessment of equitable and fair finance (of the investments of the AR6 pathways) suggest a major increase of finance flows from Annex-1 to non-Annex-1 regions.

Source: Pachauri et al. (2022)

# Fairness indicators

Name	Indicator (Unit)	Description	Source
Responsibility R1	1850 CO2FFI (GtCO 2)	Cumulative net anthropogenic fossil fuel and industry (CO2-FFI) emissions from 1850-2019	IPCC WGIII AR6, Ch2
Responsibility R2	1990 CO2FFI (GtCO 2)	Cumulative net anthropogenic fossil fuel and industry (CO2-FFI) emissions from 1990-2019	IPCC WGIII AR6, Ch2
Capability C1	GDP per Capita in 2019 (USD PPP 2017 / capita)	Total gross domestic product (GDP) per capita, for the year 2019	World Bank World Development Indicators
Capability C2	Capital stock per capita in 2019 (USD PPP 2017 / capita)	Total capital stock per capita, for the year 2019	Feenstra, Inklaar, & Timmer (2015)
Needs N1	Decent living standards deprivation in 2015 (average % deprived across all dimensions)	The average share of regional population estimated deprived across all dimensions of the decent living standards for the year 2015	Rao & Min, (2018), Kikstra et al. (2021)
Needs N2	Climate risk in 2030 (% of regional population)	The share of regional population facing acute climate risk in 2030	Byers et al. (2018)

# **Energy for Poverty Eradication**

## Decent Living Standards – Material basis for Well-being

	Dimension	Description/ (Minimum) Thresholds	
/	Housing	Safe, durable (permanent), min space (10 m <sup>2</sup> /cap)	
Physical	Thermal comfort	AC Use (26°C, 60% Humidity), 1 bedroom, nights only Heating to 18°C	<i>.</i>
Wellheing	Nutrition	Macro- and micronutrients (protein, zinc, iron, calorie	es)
weinseing	Clean ckg	LPG or electricity cook stoves	
	Water	65 l/cap/day, indoor access	Wellhe
	Sanitation	Sewage distribution (urban only)	
	Appliances	Fridge: <200 l; TV; cell phone per adult	
	Health care	\$665 per capita (national)	
	Education	\$1000 -\$1500 per student (national)	
	Mobility Infrastructure	10K p-km motorized; paved roads; public transit 🔸	

### **DLS Indicators**

Dimension	Unit
Food	kCal, Micronutrition
Shelter Comfort	m², Durable (ºC, RH)
Basic appliances	Stove, TV, Fridge
Health/Educ	\$\$
Clothing	Кg
Water/Sanit	Access, m <sup>3</sup>
Mobility	P-km

Rao & Min, Soc. Ind. Res., 2018

# Decent Living Gaps – Today

100 Decent Living Source: Kikstra et al. 2022

## **SSP Updates**

The International Committee on New Integrated Climate Change Assessment Scenarios

Integrated Assessment Modeling Consortium Founded 2007

# Towards updated and revised SSPs...

- Basic elements of SSPs were developed about 10 years ago
- New process has started to provide updates along different phases:
  - 1. Numerical updates of existing SSPs ()
  - 2. Update/extend existing narratives
  - 3. Add and/or replace SSPs
  - 4. Revisit and modify framework where necessary

# Review process of new SSP quantifications (I)

The updated SSP projections for GDP and population to be reviewed via the IIASA Scenario Explorer infrastructure

Process:

- ⇒ Updated SSP projections available via a public Scenario Explorer available at <u>http://data.ece.iiasa.ac.at/ssp</u>
- ⇒ Feedback possible until Friday, September 8, 2023

⇒ Feedback option only available for registered users

?	Workspaces 🔻	Downloads	Documentation	Lic	ense	About	dh 🔻	C
					Pro Fe Lo	ofile edback gout	G	

# Three approaches for reviewing and working with the updated SSP projections

- The interactive Scenario Explorer
  - ⇒ Create a workspace, select scenario and data in a panel
  - ⇒ See the tutorials at <u>https://software.ece.iiasa.ac.at/ixmp-server</u>
- Download the projections data as xlsx files
  - $\Rightarrow$  Go to the "Downloads" tab
- The open-source Python package pyam
   ⇒ Visit <u>https://pyam-iamc.readthedocs.io</u>

# Some guidelines for submitting a review

Please provide the following information in a review (via the SSP-Scenario-Explorer feedback form)

- $\Rightarrow$  Your name and institution
- $\Rightarrow$  The type/source of projections (GDP or population)
- ⇒ The specific region/variable/year where your comment applies
  Please be as precise as possible
- ⇒ A detailed description of your comment/remark/question
  - $\Rightarrow$  Projections x for country y after year z should be higher, because ...
  - $\Rightarrow$  Projections x are not consistent with source y ...

### Thank you very much for your attention!
